DENVER RETAIL INSIGHTS
The Mile High Shopping Experience
CBRE RESEARCH
JUNE 2016
EXECUTIVE SUMMARY

Denver's retail market is riding the demographic and economic wave, which is creating an opportunistic environment for all retail stakeholders.

With the strong performance of Denver's retail market, landlords and investors are intent on better understanding and capturing trade area demand as well as harnessing market-wide trends. At the same time, retailers are eager to embrace new opportunities and identify optimal real estate solutions that align with the region's expanding consumer base.

This report provides insight into Denver's retail landscape, the Denver consumer base and the latest trends taking over the market. Key findings include:

Top Market for Demographic & Economic Growth
- Denver's 9.6% population growth since 2010 – 2.5 times the national rate of growth
- Denver's above-average rate of job growth resulting in the addition of nearly 160,000 new jobs in three years
- Expanding median household income – increasing 15.6% since 2010 to $68,274

Retail Real Estate Perspective
- Second-highest absorption levels compared to peer markets
- 140% increase in retail investment sale price per sq. ft. since 2012 for the sharpest gain among peer markets
- Record investment activity volume as of Q1 2016 on a four-quarter rolling basis to $1.9 billion

Denver Retail Trade Areas Overview
Widely recognized as Denver's luxury retail scene, Cherry Creek achieves the highest rents in the region. As of Q1 2016, asking lease rates in Cherry Creek averaged $36.20 per sq. ft. NNN but can reach as high as $70 per sq. ft. compared to $50 per sq. ft. in downtown Denver and $35 per sq. ft. in Park Meadows on the high end. The strength in market fundamentals is driven by demand for premium space and supported by increasingly dense mixed-use development. With a full development pipeline focused on bringing luxury to consumers and residents, Cherry Creek will continue to be Denver’s "high street."

Trend Spotlight: The Marketplace Concept
The marketplace concept is reviving consumers and retailers alike in urban infill locations. The formerly underutilized industrial buildings are now vibrant and often catalytic developments that stimulate more commercial development.

04 Top Market for Demographic & Economic Growth
09 Meet the Denver Consumer
10 Retail Real Estate Perspective
14 Denver Retail Trade Areas Overview
20 Trend Spotlight: The Marketplace Concept
INTRODUCTION

The retail market’s recovery in Denver has lagged other commercial sectors recently ... that is up until now. Unprecedented job gains combined with game-changing population growth have aligned for several years of fundamental strengthening, innovative retail solutions, an emphasis on placemaking and ground-breaking new projects. Partly due to minimal new supply, well-located premium retail space is in high demand both in the urban core and in suburban markets.

As tenants and landlords strive to adapt to the ever-changing needs of the consumer base, this report provides insight into Denver’s retail landscape, the Denver consumer base and the latest trends taking over the market.

TOP MARKET FOR DEMOGRAPHIC & ECONOMIC GROWTH

Growing Consumer Base

Denver’s population has grown 9.6% since 2010 compared to 3.9% national growth. This explosive growth pushed the Denver market (including Boulder) past the 3.0 million mark and into the top 20 for both metropolitan areas and cities (Denver). Denver ranks 12th for the largest population gain over the 2010-2015 period with a 271,000-person increase. Among the fast-growing southwest markets, Denver ranks third for population growth (2010-2015).

Note: Rank given among the 50 largest markets. *Table sorted in descending order of median household income growth.

Lifestyle and job opportunities are the primary drivers behind impressive net migration. Capital investments such as the nearly complete metrowide light and commuter rail project have also strengthened the region’s competitive position and added in attracting households.

Millennials and baby boomers have fueled record net migration to Denver in the current economic cycle. According to the Brookings Institute, Denver ranked second for net migration of millennials and fifth for net migration of baby boomers among the nation’s largest metropolitan regions. The top five states for net migration into Colorado since 2012 are California, New York, Illinois, Texas, and New Mexico.

The Denver consumer base between ages 18 and 34 years represents 23% of the metro area population compared to baby boomers aged 55 to 74 years that account for 20% of the total.

Homebuilders and apartment developers are striving to meet the needs of the growing population. Even so, demand has exceeded supply, and the cost of both rental apartments and single-family homes has risen significantly in recent years.

The wealth effect from rising home prices may be encouraging Denver consumers to shop. Existing single-family home prices have increased 44% in five years. Low inventory levels of for-sale product on the market in combination with modest new development activity will continue to push sale prices and home values. On the other hand, lease-up of the 26,000 apartment units delivered in the past five years has directly supported household goods retailers. Denver’s housing market recovery is widespread, but the recovery is pronounced in urban areas — including urban suburban areas.

Notable Employment & Income Gains

The Denver market added more than 222,500 jobs since the recession ended for an annual average gain of 44,500 jobs. Underscoring the region’s economic prowess, more than 50,000 jobs have been added each year since 2013, which well exceeds the historic average. In fact, the only other consecutive period that job growth exceeded 50,000 was 1999-2000. Denver’s rate of job growth has also exceeded the U.S. every year since the most recent recession — posting 3.5% gain in 2015. Unemployment in Denver continues to hover around 3.0% - well-below the U.S.’s 5.1% unemployment.

Job growth supports overall retail sales activity in the region, but there is a more direct connection to the retail sector. According to the University of Colorado, one of every 10 jobs in Colorado occur in the retail sector. Further, healthcare, professional and business services, technology, financial activities, leisure and hospitality and construction are some of the fastest-growing industries for new jobs.

Job growth boosted household income levels and retail activity in recent years – particularly high-paying energy, technology and healthcare jobs. The median household income in Denver increased 15.6% to $68,274 since 2010 or 3.9% annually on average, which is the third-fastest rate of increase among the 50 largest markets (San Francisco and San Jose reported sharper increases). As of Q4 2014, Denver has the 14th-highest median household income. According to projections from Moody's Analytics, median household income will exceed $72,000 by year end 2016. Luxury retail in Denver has historically been limited but higher-end retailers are taking note of Denver’s income growth and seeking out premium locations such as Cherry Creek.

Retail sales activity in Denver has posted year-over-year gains since 2010. Total retail trade surpassed $32.7 billion over the 12-month period October 2014-September 2015. Motor vehicles, food and beverage and general merchandise are the dominating segments – accounting for over half of total volume. The food and beverage category is seeing strong growth specifically within the fast casual/QSR restaurant segment.

Figure 5: Denver Metro Retail Sales Profile (October 2014 - September 2015)
Denver’s slower-to-recover retail market compared to other commercial property sectors is now improving at a fast clip. Average asking lease rates are increasing broadly across the Denver market while vacancy steadily declines. The convergence of a growing consumer base and moderate new supply is central to the sector’s fundamental improvement during recent quarters. E-commerce is a headwind to demand for brick-and-mortar space but not yet strong enough to stymie fundamental improvement.

The Denver retail market is well-balanced considering new supply and demand amongst peer markets. As of Q1 2016, Denver ranks fifth among peer markets in construction activity by sq. ft.—ahead of only Salt Lake City and Austin—although construction activity is increasing. Denver ranks second in Q1 2016 net absorption by sq. ft.—trailing only Chicago. As a result, Denver has the third-lowest availability rate compared to its peers and a moderate overall average direct asking lease rate.

Source: CBRE EA, Q1 2016.
Strong retail market fundamentals have attracted local and national investors to the market. Denver experienced the sharpest increase in investment sale price per sq. ft. from 2012 to today amongst peer markets—increasing 140% to $217 per sq. ft. On a rolling four-quarter basis, Denver hit record volume of $1.9 billion in retail investment activity as of Q1 2016.

Notable retail transactions over the past four quarters include:

Cherry Creek embodies luxury retail and embraces both mixed-use and density. With a 26.1% increase in average asking lease rate per sq. ft. since 2010 and tight vacancy rate of 1.6%, Cherry Creek is one of the fastest growing and most successful retail destinations in Denver and home to the region’s highest retail rents. New and significant office, hotel and multifamily developments have transformed the area over the past decade yet it remains walkable and pedestrian friendly. Cherry Creek draws consumers from across the region and is the primary retail destination for luxury shoppers.

Park Meadows – Destination Suburban Retail

Park Meadows is an expansive retail destination serving the south portion of the Denver market as well as patrons from outside the metro ring in Castle Rock or as far away as Colorado Springs. Park Meadows complements the high-income communities surrounding the southeast office market centered on the Denver Tech Center. The trade area is light-rail served and nestled among business parks and residential neighborhoods. A diverse mixture are present within the trade area, although furniture stores are prevalent. While development activity has been modest in recent years, 586,500 sq. ft. of Class A office space and 300 multifamily units are planned for the future.

Downtown Denver – The Urban Frontier

Downtown Denver is at the forefront of the urban resurgence evidenced by game-changing new development and a multi-modal transit center. Thousands of residential units and new retail—particularly grocery and food stores—have evolved downtown into a balanced live-work-play (and shop!) environment. In fact, the downtown residential population has nearly tripled since 2000 to nearly 76,000 people. From the 16th Street Mall and Denver Pavilions to Larimer Square, the trade area has seen 11.1% growth in average asking retail lease rates in five years. Restaurants are a mainstay in the tourism-rich market and household goods retailers are increasingly opening their doors.

TREND SPOTLIGHT: THE MARKETPLACE CONCEPT

The marketplace phenomenon arrived in Denver in 2013 to much fanfare. The age-old but revived concept ignited a community-centric retail experience that draws consumers of all age groups. Focused on engaging the consumer and featuring local and regional retailers, this concept creates a demand of needing to be “in the experience.” Denver marketplaces have attracted local restaurants, brewers, bakers, butchers, grocers and jewelers among other businesses for a one-stop retail experience grounded in authenticity and inspired by entrepreneurship.

Marketplaces in Denver are primarily redeveloped industrial properties in urban infill locations to date. The formerly underutilized and well-located properties are now vibrant, modern retail environments that have also spurred adjacent development. Marketplaces are expected to expand further into suburban neighborhoods and seek adaptive reuse opportunities.
